

## Patient 4: Janice

**Janice is a 52-year-old woman who has had a gastric bypass, bringing her weight down from 330lb to 160lb. To go with her new look, she wanted white teeth and had been using Crest White strips extensively.**

She was also lacking vitamins and nutrition due to poor diet, and her teeth had become extremely sensitive to cold.

The terminal third of her anterior teeth had become translucent due to demineralisation.

Janice had noticed this and assumed that decay was causing her teeth to become very thin. My advice to her involved several approaches:

- Stop whitening
- Nutritional counselling
- Take medical advice
- Use BioMin™

Five months later the difference was apparent.

Her sensitivity had reduced dramatically,

and there was a visible difference in the density of the tooth structure, due to remineralisation of the enamel.

She has found it easy to introduce BioMin™ into her daily oral care routine, as it is an everyday toothpaste. She has been delighted with the results.

The fact that BioMin™ can be used as part of a regular oral care routine, and does not involve the patient in extra 'steps' each day, means that compliance is far better than with other products, and the improvement in both sensitivity and tooth density is apparent. We would envisage recommending BioMin™ as an everyday toothpaste for 80-90% of our patients. It will be a gamechanger.'

## Case Study
