

# BioMin™

Armour for Teeth

## Case Study

Theresa M<sup>c</sup>Carter <sup>BSDH, RDH</sup>  
California, USA

### Patient 1: Elise

**This patient is a 28-year-old female. Born prematurely, she had worn orthodontic braces for 7 years and now has sensitivity due to enamel hypoplasia, together with localised recession on several teeth.**

She has short roots and white spot lesions were visible on her molars. She has poor home care and suffers from acid plaque.

As an adult, she wears a night guard and has used Sensodyne with Novamin, and Tom's of Maine Rapid Relief for her sensitivity problems, without success. She had tried MI paste containing calcium phosphate but after a short period was not compliant with the treatment.

After using BioMin™ for four months, Elise's sensitivity has reduced dramatically and is now almost non-existent. The enamel is visibly more dense and less translucent on the terminal third of her anterior teeth.

The advantage of BioMin™ is that it is an everyday toothpaste which users can incorporate into their daily routine, encouraging compliance.'

Reported to Moira Crawford, on behalf of BioMin Technologies Limited.
