

Case Study

Theresa M'cCarter ^{BSDH, RDH}
California, USA

Patient 2: Mariel

'Mariel is a 30-year-old female presenting with severe enamel hypoplasia. Her teeth were so translucent that they were almost blue, and she experienced extreme sensitivity to cold.'

She had tried Sensodyne Repair and Protect for sensitivity relief without success. After three months' use of BioMin™, she noticed a significant reduction in her sensitivity.

The remineralisation effect on Mariel's tooth enamel became clearly visible in the lower third of the teeth which had been extremely translucent.

Following the use of BioMin™ they were visibly denser and more opaque.

They are visibly denser. BioMin™ makes a real difference for patients with hypoplasia.'

Reported to Moira Crawford, on behalf of BioMin Technologies Limited.
